[# 2 new cases of new pneumonia confirmed in Guizhou #] According to the Guizhou Health and Medical Commission, on January 22, 2 new cases of pneumonia were confirmed in Guizhou, including one in Tongren and one in Qiannan. Patient Chen Moumou, female, 50 years old, living in Bijiang District, Tongren City. The patient attended training in Changsha, Hunan, from January 10th to 12th, 2020. She ate at the same table as a student from Wuhan, and developed fever on the morning of the 14th. On the 21st, he was referred to the designated hospital for isolation and treatment on the 22nd. Patient Wang Moumou, male, 20 years old, living in Guiding County, Qiannan Prefecture, studying at Vocational and Technical Teachers College, Wuhan University of Technology, Hubei Province. He developed symptoms of asthma on January 18, 2020, and was admitted to designated hospital for isolation and treatment on the morning of the 18th.

As of 12:00 on January 23, a total of 3 cases of pneumonia of new coronavirus infection have been confirmed in Guizhou. All cases have a history of residence, travel and close contact in Wuhan. At present, they are receiving isolation treatment at designated medical institutions with stable conditions and no severe cases. The local health and other departments have followed up and followed up with close contacts. (CCTV reporter Gou Shunting)

Shut up sand sculpture

If you are from an epidemic area, you have been to Wuhan, or you have come back from Wuhan. Try not to contact others, and continue to observe your health for 14 days! Please consciously observe at home for 14 days! This is a realization, it is also a responsibility, and it is also about the health of you and your family! Thank you!

Everyone must wear a mask when they go out, and no one should be lucky, even if your city is Line 18, even if there is no case in your city, even if you don't think you will be infected like this. It's very crowded during the Spring Festival, but you will never know where the passers-by walking by come from and who they are in contact with.

In the face of new pneumonia, whether it is serious or not, we should also stop it from spreading. Our fear of death (without wearing a mask, going to a densely populated place, etc.) is the biggest harm to medical staff. Each additional suspected infection , Just add a point of harm to the medical staff, we will slowly push the
